
Creating Contracts

Overview

You can use any of the following methods to create a contract:

- Create a contract/proposal from scratch
- Create a new contract as part of an existing proposal
- Create a Master Contract
- Save a previously created contract template as a new contract.
- Save an existing contract/offer as a new offer.

Regardless of how the contract is initiated, the source contract ID is stored with the new contract.

While you can save existing templates or contracts/proposals as a new proposal, you cannot change the type of contract and save the template with a different name (Save As). For example, you cannot save a Group contract as an Independent contract. However, you can either create a new contract/proposal, or you can select the type of contract/template you want and save it to a new name (Save As).

Select Contract Type Dialog Box

Navigation Path: **Contracts > New contract**

To begin the process of creating a contract/proposal, click the New link in the Contract Tasks list to open the Select Contract Type dialog box. Contracts are directly tied to an organization. In the Select Contract Type dialog box, the application sets the organization to the same organization that your user ID is tied to (My Orgs). Once set, the organization cannot be changed.

The following table describes the fields in the dialog box.

Name	Description
Organization	When you create a contract, it is automatically tied to the same organization that your user ID is tied to. If you belong to multiple organizations, it is tied to your default organization. In a multi-organization environment, you can tie the contract to a child organization, but not to a parent organization. You can change your selection later but only before you save the contract for the first time. Note: The selected organization's timezone is defaulted for the contract and also applicable to price floors, price lists, market baskets, contract templates, payments packages, and estimated payments.
Domain	Determines if the contract will be Government or Commercial. Different business rules apply to each domain and not all users may be able to create both types of contracts. The options available in the drop-down list depend on the organization selected while creating the contract and are configured at the time of system implementation.
Contract Type	Lets you select one of the following contract types based on the domain you choose:

Name	Description
	• Master Contract, Institutional Commercial: Independent, Group, IDN, Master Contract, Institutional, Managed Care • Master Contract, Institutional Government: Independent, Group, IDN, FSS, PHS, Master Contract, Institutional, Medicare Part D Note that the contract type determines which rebate programs will be available. For example, an Institutional contract cannot have a Fee for Service program.If you select an FSS type contract then the Program Only check box is automatically selected

NOTE: You may also have a Sub Type drop-down list. Whether or not you do, and what items it may contain, depends on how your company configured the Model N application. Contact your business or IT administrator for information on these options when available.

Distribution Method	You can select whether the contract's distribution method is direct, indirect, or both (Direct/Indirect). You can change the setting while the contract is in Draft status, but it cannot be changed after the contract has been submitted for approval.
Generic/Brand	Lets you select whether the contract is for generic or name brand drugs. Note that these options only apply to the Generics industry and only appear if the Generics application switch is turned on. The default option is Generic.
Rebate Program Only	If checked, the resulting new contract will not contain price programs.
Customer Required	Available only for Purchased Based contract types and is selected by default. Clear this option only if you do not require a contracted customer on the contract
Use 340B Eligibility	Available only for PHS Government contracts, select if you want to limit eligible customers to only those with 340B IDs and customers which have a child relation with 340B eligible customers of the type '340B Ship Location Of'. Note: Customers with 340B IDs can be used in both strategy based and non-strategy based price programs. However, customers with a child relation can be used only in the case of strategy based price programs.

Create Authoring Contract* Contract Authoring	Allows you to the ability to create an authoring contract.The options are: • Yes • Yes • No When the option is set to Yes, the application creates an authoring contract when the (Contract Management) contract is saved for the first time.When the option is set to No, the application will not create an authoring contract initially but lets you add an authoring contract manually using the Add Authoring Contract link.
OK	Initiates a new contract.
Cancel	Cancels the creation of a new contract.

Save As Dialog Box

You can use Save-As to create a new offer and/or a new offer that is part of an existing proposal.

You can create a new contract using another contract or template as the basis or starting point. Contracts/offers that are in any contract lifecycle status may be saved as another, new contract/offer. However, only templates that are active can be saved as another contract/offer. When a contract is saved as a new contract, the newly created contract references the copied contract/offer using a Source and Source ID.

NOTE: When you do Save-As, then the application copies all the programs into the new contract and also maintains the same dependency relationship between predecessor and dependent programs.

Save As Contract Offer

When you save a contract as a Contract Offer, you create a new contract with a new number. Initially the new contract is a draft with the same domain and contract type as the original. The new offer inherits data from the saved-as offer/contract, with the following exceptions:

- The contract status is set to Draft
- A new Contract ID is generated
- Contract Author is the person who saved the original contract as a new proposal
- Contract Source in the new contract/proposal general information section is set to Contract
- Source ID in the newly created contract/proposal general information section reflects the Contract ID of the original contract
- Contract approval history is not copied over to the new contract
- Related proposals, versions, and source history pages are updated to reflect the related documents for the current contract proposal

Other relevant contract information is copied to the new contract/proposal to minimize repetitive data entry. Information copied to the new contract proposal includes:

- Contract general information (source, source ID, and contract ID will change)
- Business segments on contract

- Products on contract
- Contract pricing
- Programs
- Terms and Conditions
- Eligible members
- Commitments
- Attachments
- Contract print templates

Save As Contract Template

You can create a new Contract Template using another contract as the starting point. Contracts of any status may be saved as a new contract template. When a contract is saved as a new contract template, the newly created template references the copied contract/proposal using the Source and Source ID.

When you save a contract as a new contract template, the new template inherits the same contract type and sub-contract type from the original by default and the version number increases to 2.

The following table describes the fields in the dialog box. Required fields display an asterisk (*) next to the field name.

Name	Description
Save As Type *	Select a contract type: • Contract Offer • Contract Template
Name *	Enter a name for the contract you are creating.
Contract Type	This field defaults to the contract type of the saved from contract /contract template. Select the contract type you want to save as. You can see only those contract types that the saved from contract/contract template contract can be converted as described in Save As Possibilities .
Customer Required	Check box indicating if a contract needs to be created with contracted customer. When checked, a purchase based contract requiring a contracted customer is created. When unchecked, a purchased based contract requiring no contracted customer is created. Note: This option is available only for Purchase Based Contracts.
OK	Creates a new contract.

Name	Description
Cancel	Cancels the action.

Save As Possibilities

A Purchase Based contract or contract template can be saved as Purchase Based or Master contract or contract template and vice versa. When a Contract Type is saved as itself, all contract information is copied as is from the Saved From contract or contract template to the Saved To contract or Contract Template. When a Purchase Based Contract Type is saved as a Master Contract Type or vice versa, all contract information except commitments, access inclusions and exclusions are copied. Contract templates do not have any commitments associated with them. Hence no commitment information is copied in case of templates.

A Purchased Based, Master Contract or contract templates cannot be saved as a Managed care, Medicare Part D, FSS, or PHS contracts or contract templates.

A Managed Care and Medicare Part D contracts or contract templates can be saved only as a Managed Care and Medicare Part D contracts or contract templates.

The Tricare, FSS and PHS contracts or contract templates cannot be saved as any other contracts or contract templates except themselves.

Caution: While creating a new contract using 'Save As' option, you need to check the 'Customer Required' option to be able to choose a contracted customer, else if the 'Customer Required' option is unchecked, a contract is created without a contracted customer.

- [General Information](#)

Edit Address Page

After you add a customer to a contract, the customer’s address displays in the contract’s general information section. You can modify the customer address as it appears on a contract. Modifying this address does not affect the customer’s address as part of the customer record, since the Customer module is typically the system of record for this information. The Model N application is considered the system of record for contractrelated data, such as the customer address as part of a contract.

The following table describes the fields and buttons on the Edit Address page. Required fields display an asterisk (*) next to the field name.

Name	Description
Street	Specify a primary street address for the customer on this contract. If an existing customer was selected as the contract customer, this field displays the customer's primary street address.
[Address Line 2]	Specify a secondary street address for the customer address on this contract. If an existing customer was selected, this field displays the customer's secondary street address.
City	Specify a city for the customer address. If an existing customer was selected, this field displays the name of the city.
State *	Specify a state for the customer address. If an existing customer was selected as the customer, this field displays the name of the state.
Zip	Specify a zip code for the customer address. If an existing customer was selected, this field displays the customer's zip code.
Country *	Specify a country for the customer address on this contract.
Actions	

OK	Updates the specified information to the contract.
Cancel	Cancels the action (edit address).

Select a Staff Member Dialog Box

You can select and add an active staff member from the Contract General Information page for the Author, Additional Delegate, and Sales Rep fields. The application displays the following validation message: “The {user} on the Contract is in Inactive Status.”, if any of the selected staff members become inactive after added in the contract. This validation message can be an error or a warning based on the setting of the `com.modeln.AppSwitch.ContractDoc.invalidUsers.severity` appswitch. When this appswitch is set to Warning, the application displays the message as a warning where the user can still continue working on the contract. When this application switch is set to Error, the user cannot continue working on the contract until the error is resolved.

The following table describes the fields in the dialog box.

Name	Description
Staff Member Search Parameters	
Look in	Select a folder from which to begin your search. Options available are • Customer Aligned User • Model N User If you select Customer Aligned User, the system displays the shows the members aligned to the contracted customer having the roles of Sales Rep Manager.
First Name	Type the name (first) of the person you are searching for.
Last Name	Type the name (last) of the person you are searching for.
User ID	Type the User ID of the person you are searching for.
Type	Select a user type. The options are User and Group.
Email	Type the email address of the person you are searching for.
Search	Searches based on your criteria.

Clear	Clears your search criteria.
Staff Search Results	
Name	Displays the staff members that match the specified search criteria. If clicked, the staff member becomes the current selection.
User ID Group Name	Displays the staff member ID that matches the specified search criteria. If you selected Group as the type, then this field label displays the group name.
Type	Displays the staff member type that match the specified search criteria.
Email	Displays the email address of the staff member that matches the specified search criteria.
Selected Item: Add	Adds the selected item to the contract.
Selected Item: Remove	Removes the item from the selection list so that you can choose another (you can select only one staff member at a time.)
Selected Items	Displays the most recently selected staff member. You can select only one staff member at a time.

Actions	
OK	Adds the selected item to the contract.
Cancel	Cancels the action.

Master Contract General Page

Navigation Path: **Contracts > Contract ID link > General**

The Master Contract General page includes basic information about the whole contract. Most importantly, this page identifies the contract start and end dates, the customer name, the Customer ID, and the Contract ID.

The following table describes the fields and buttons on the page. The information applies to the Master Contract type. An asterisk (*) indicates a required field

Name	Description
Contract Information	
Contract Name*	Enter the name of the master contract (100 character maximum).
Contract Value	The total value of the master contract. This information is calculated offline and entered when the contract is created. The value can be used for approval purposes, for example, when you want to send contracts over a certain value for approval.
Contract ID	Refer to Contract Numbering on page for details.
Proposal ID	Application-generated ID.
Type	Displays the type of the contract (for example, Master). You specify the contract type when you create the contract. The contract type visible depends on the organization selected while creating the contract.
Contract Sub Type	Displays the contract sub type of the contract, for example, Simple Offer. You specify the sub type when you create the contract. The options available in the drop-down list depend on the organization selected while creating the contract and are configured at the time of system implementation.

Domain *	Displays the following options to select from: • Commercial • Government Defaults to the domain value of saved from Contract. To edit a domain, the user should have the access to that particular domain. The options available in the drop-down list depend on the organization selected while creating the contract and are configured at the time of system implementation.
Distribution Method*	The distribution method for the contract. Options include direct, indirect, or both (Direct/Indirect). The method can be changed while the contract is in Draft status.
Generic/Brand	Displays whether the contract is for generic or name brand drugs. This field only applies to the Generics drug industry and only appears if the Generics application switch is turned on.
Status	Application-determined status of the contract.
Organization	Displays the organization associated with the contract. You specify the organization when you create the contract.
Time Zone	Displays the time zone associated with the contract.

Active Version	Displays the currently implemented version. A value exists only if there is at least one implementation done on the contract. Clicking on the number displays that version of the contract.
Amendment #	Displays the amendment number of the contract or the proposal you are currently viewing. This number indicates the contract or proposal's amendment number, not the total count of amendments. The amendment number can be up to four digits.
Customer Amendment #	Displays the customer amendment number of the contract or the proposal you are currently viewing. This amendment number is different from the amendment number generated and represents the customer specific amendment #.
Version #	Displays the version of the contract or proposal that you're currently viewing, as well as the total number of versions of the contract or proposal (X of Y).The total number of versions (Y) links to the most recent version of the contract.
Version Date *	Displays the date and time this version of the contract/ proposal was created.
Last Updated *	Displays the date and time the contract/proposal was last saved.
Source *	Displays the source from which contract offer was created:

	• New (created from scratch) • Contract (copied from contract) • Template (created from template) • Amended (created via amendment)
Rebate Program Only	Displays Yes or No to indicate whether this is a Rebate Program Only contract.
Evergreen	Indicates that the contract is ongoing and can be extended beyond it's end date. Note that Evergreen contracts require manual extension, following a search.
Users	
Author*	Displays the name of the person creating the contract. If you want to create a contract on behalf of someone else in the organization, you can override the name. You can even select a group.
Author*	Button associated with the Author field that enables users to select an author from the list of Staff Members. The option to select an author from customer aligned staff members is also available.
Additional Delegate	You can use the additional delegate field to alert others in the organization about changes to the contract; you can even select a group.

Additional Delegate	Button associated with the Additional Delegate field that enables users to select an additional delegate from the list of customer aligned staff members. The option to select an additional delegate from all staff members is also available.
Offer Terms	
Creation Date *	Application-determined date/time when the contract was first created.
Sent for Signature	Displays the date when the sales representative sent the contract/ proposal to present to the customer. Click the calendar icon to select a different date.
Signature Due By	Last date that contract pricing is valid for the customer; expired contract proposals submitted to approval workflow generate a contract exception. Signature Due By: Signature Due By date = Sent for Signature date + Term (days)
Term	Displays the term of the master contract in days; when you enter the term, the application updates the contract end date based on the contract start date (if provided). If you change the Contract End Date, the application recalculates the term. Contract End Date = Contract Start Date + Contract Term (Days).

Contract Terms	
Start Date	Displays the master contract start date.
End Date	Displays the master contract end date.
Update	Available for non-amended, pre-implemented contracts. Provides you with the ability to mass-adjust commitment, eligibility, program, and pricing line-item end dates when contract start dates change. Note that the Model N system automatically saves the contract and the base prices of the line items added in the contract are updated with the new dates when you perform this update. Note: The update functionality are active in the draft mode only.
Term	Displays the term of the master contract in months; when you enter the term, the application updates the contract end date based on the contract start date (if provided). If you change the Contract End Date, the application recalculates the term. Contract End Date = Contract Start Date + Contract Term (Months).
Comments	
Section Comments	Click this link to navigate to Comments section under Related Items. For more information see Comments Page.
Notes	

External Notes (printed)	You can choose to display your notes on the printed master contract (visible to customer). Go to the Contract Print Template to define this option. The external note has a 4000 character limit.
--------------------------	---

General Information

Navigation Path: **Contracts > Contract ID link > General**

In the context of the Contract application, the General page includes basic information about the whole contract. Most importantly, the General page identifies the contract start and end dates, the customer name, the Customer ID, and the Contract ID.

Use the Contract General page to change header-level information in a contract. The information is editable only in certain contract lifecycle statuses and only for select fields. For example, with a contract in Draft status and depending on your access privileges, you may be able to modify the Customer or the Sales Rep that is assigned to the contract.

The following table describes the fields and buttons on the page. The information applies to all contract types. An asterisk (*) indicates a required field.

Name	Description
Customer Information NOTE: The Customer Information section does not appear on contracts that do not require a contracted customer.	
Customer ID *	Customer ID associated with the contracted customer specified on contract. Note that the Model N system automatically saves the contract when you change the associated customer. Once a contract is implemented, this field can no longer be changed. This includes when the contract is being amended. Note: This field is not available when you are creating an FSS contract. Instead you must enter a name in the Contract Information section. Allows you to enter an alternate identifier (340B, HLN, DEA etcetera), which in return displays the associated customer id for the alternate id.
Chooser Button	Button associated with the Customer ID field. Opens the Select Customer dialog box, which displays a list of customers that belong to the same organization that the contract is tied to. You can only select one customer for a given contract.

Name	Description
Name *	Name of the customer on the contract. This information is derived from the selected Customer ID.
Contract Value	The total value of the contract. This information is calculated offline and entered when the contract is created The value can be used for approval purposes, for example, when you want to send contracts over a certain value for approval.
Address *	Displays the customer's primary address derived from selected Customer ID.
Contact	Customer contact information. This information is options and will appear on printed documents.
Contract Information	
Name *	Enter the name of the contract (100 character maximum).
Contract ID *	Displays the 8-digit contract identifier. Refer to Contract Numbering

Name	Description
Alternate Contract ID	An alternate ID for identifying the contract, especially those created using data imported from an external file. You can conduct a search by using the Alternate Contract ID. It is not a required attribute for a contract template.
Customer Contract ID	Used to track the customer's own contract ID associated with the current proposal/contract.
Type	Displays the type of the contract. You specify the contract type when you create the contract. The contract type visible depends on the organization selected while creating the contract.
Contract Sub Type	Displays the contract sub type of the contract, for example, Simple Offer. You specify the sub type when you create the contract. The options available in the drop-down list depend on the organization selected while creating the contract and are configured at the time of system implementation.
Domain *	Displays the following options to select from: • Commercial

Name	Description
	• Government Defaults to the domain value of saved from Contract. To edit a domain, the user should have the access to that particular domain. The options available in the drop-down list depend on the organization selected while creating the contract and are configured at the time of system implementation.
Generic/Brand *	Displays whether the contract is for generic or name brand drugs. This field only applies to the Generics drug industry and only appears if the Generics application switch is turned on.
Distribution Method	Displays the distribution method for the contract. Options are: Direct, Indirect, or Indirect/Direct. By default the distribution method is set to Direct. The price program (minimum order and payment terms) attributes at the contract and/or line item level are triggered by the distribution method. If the contract's distribution is set to Indirect, the minimum order attributes will not be available at the contract and line item level and the payment terms attribute will not be available at the line item level.

Name	Description
	The contract's distribution method drives the editability of the following price program line item attributes: • Distribution Method • Payment Terms • Minimum Order Attributes NOTE : This field is editable only if the contract is in Draft status. Distribution Method is NOT editable if the contract is in Amended or Implemented status. Changes to Minimum Order Attributes and Payment Type will be reflected in the contract's version if the contract is in Draft status, meaning that you're in the process of creating a new contract or amending an existing contract the version number will be incremented.
Status *	Application-determined status of the contract.
Eligible for 340B	Indicates whether customers with 340b status are eligible for pricing. Appears only on PHS Government contracts.
Organization	Displays the organization associated with the contract. You specify the organization when you create the

Name	Description
	contract. You can change your selection later but only before you save the contract for the first time.
Time Zone	Displays the time zone associated with the contract. This is the time zone of the organization you selected while creating the contract. Note: The selected organization's time zone is defaulted for the contract and also applicable to price floors, price lists, market baskets, contract templates, payments packages, and estimated payments.
Active Version	Displays the currently implemented version. A value exists only if there is at least one implementation done on the contract. Clicking on the number displays that version of the contract.
Amendment # *	Displays the amendment number of the contract or the proposal you are currently viewing. This number indicates the contract or proposal's amendment number, not the total count of amendments. The amendment number can be up to four digits.

Name	Description
Customer Amendment #	Displays the customer amendment number of the contract or the proposal you are currently viewing. This amendment number is different from the amendment number generated and represents the customer specific amendment #.
Version #	Displays the version of the contract or proposal that you're currently viewing, as well as the total number of versions of the contract or proposal (X of Y).The total number of versions (Y) links to the most recent version of the contract.
Version Date *	Displays the date and time this version of the contract/ proposal was created.
Last Updated *	Displays the date and time the contract/proposal was last saved.
Source *	Displays the source from which contract offer was created: • New (created from scratch) • Contract (copied from contract) • Template (created from template)

Name	Description
	• Amended (created via amendment)
Amended	Indicates whether or not the contract has been amended.
Rebate Program Only	Displays Yes or No to indicate whether this is a Rebate Program Only contract.
Evergreen	Indicates that the contract is ongoing and can be extended beyond it's end date. Note that Evergreen contracts require manual extension, following a search.
Data Receipt Due	Sets the number of days after the end of the rebate effective payment period where the payment will be ready for processing. There is often a delay for Managed Care claim processing as the customer needs time after the quarter end to assemble claim data. The default number of days are set by application switch, but can be edited on the contract. NOTE: By default, the application sets this as 45.
Due to Customer	Sets the number of days after a payment has been marked as "Ready for Processing" that a payment is

Name	Description
	actually due to the customer. The value set on this field is added to the lag set for the Ready for Processing days. NOTE: By default, the application sets this as 60.
Rx Norm Method	Options are: • DACON • DOS This enables you to select whether the contract uses DACON or DOS as conversion factor for scripts. Note: By default, the application sets this as DACON. This setting does not affect the contracts that use components that do not use Rx normalization.
Authoring Contract NOTE: This section is available only if a contract in Contract Management has a corresponding Authoring contract.	
Authoring Contract Status <i>Contract Authoring</i>	Displays the status of the Authoring contract. The possible status values are: • Draft • Review and Redline • Authoring Complete

Name	Description
	• Active
Signed/Unsigned Indicator * <i>Contract Authoring</i>	Selecting an option indicates whether the Authoring Contract is Signed or Unsigned. Signed value moves the Authoring Contract from “Review & Redline” to “Authoring Complete” state. If the authoring contract is not in Authoring Complete state, the system displays a warning. If the contract is implemented, the Authoring Contract is made Active. For Unsigned value, the Authoring Contract remains in the same state and is not activated when the contract is implemented. NOTE: This field is editable only when the contract is in Draft state. The application displays the following error when no value is selected. Please select a value for the Authoring Contract Signed indicator.”
Authoring Amendment Status <i>Contract Authoring</i>	Displays the status of the authoring contract amendment. NOTE: You will not see this field when the amendment is active.

Name	Description
Authoring Amendment Start Date <i>Contract Authoring</i>	Displays the start date of the authoring amendment which indicates when the amendment will be effective.
Authoring Amendment Approval Status <i>Contract Authoring</i>	Displays the approval status of the authoring contract amendment. Note: This field is visible only when the authoring contract approval status is set to None, Reject, Withdraw or Delegate.
Users	
Author *	Displays the name of the person creating the contract. If you want to create a contract on behalf of someone else in the organization, you can override the name. You can even select a group.
	Button associated with the Author field that enables users to select an author from the list of Staff Members. The option to select an author from customer aligned staff members is also available.

Name	Description
Additional Delegate	You can use the additional delegate field to alert others in the organization about changes to the contract; you can even select a group.
	Button associated with the Additional Delegate field that enables users to select an additional delegate from the list of customer aligned staff members. The option to select an additional delegate from all staff members is also available.
Sales Rep	Displays the sales rep associated with the contract. The name of the sales rep (Account Manager, Key Account Coordinator, Account Rep) changes based on the value set in the “Sales rep label” application switch. Default value is Sales Rep. Depending on the configuration of your system, this field may or may not populate. You can select a group.
	Opens the Select a Staff Member dialog box, which lets you choose from the list of customer aligned staff members available to you from within the organization. The option to select a sales rep from all staff members is also available.

Name	Description
Sales Rep Address	Displays the address associated with the sales representative. When a group is selected as a user, this field is blank. The value of this field is determined based on the setting of the “Sales rep label” application switch.
Offer Term	
Creation Date *	Application-determined date/time when the contract was first created.
Sent for Signature	Displays the date when the sales representative sent the contract/proposal to present to the customer. Click the calendar icon to select a different date.
Signature Due By	Last date that contract pricing is valid for the customer; expired contract proposals submitted to approval workflow generate a contract exception. Signature Due By: Signature Due By date = Sent for Signature date + Term (days)

Name	Description
Date of Signature	Date on which the contract is signed. Though this field is unavailable in the contract results, you can see it when you export the contracts to a .csv file.
Signed Document Received	Date on which the signed contract is received. Click the calender to select a different date. Though this field is unavailable in the contract results, you can still see it when you export the contracts to a .csv file.
Term *	Displays the number of days contract/proposal pricing is valid. The default setting is zero days.
Contract Term	
Start Date	Displays the contract start date.
Update	Available for non-amended, pre-implemented contracts. Provides you with the ability to mass-adjust commitment, eligibility, program, and pricing line-item start dates when contract start dates changes. Note that the Model N system automatically saves the contract and the base prices of the line items added in the

Name	Description
	contract are updated with the new dates when you perform this update. NOTE: The update functionality also applies to programs based on a strategy.
End Date	Displays the contract end date.
Update	Available for non-amended, pre-implemented contracts.Provides you with the ability to mass-adjust commitment, eligibility, program, and pricing line-item end dates when contract start dates change. Note that the Model N system automatically saves the contract and the base prices of the line items added in the contract are updated with the new dates when you perform this update. NOTE: The update functionality also applies to programs based on a strategy.
Term	Displays the term of contract in months; when you enter the term, the application updates the contract end date based on the contract start date (if provided). If you change the Contract End Date, the application recalculates the term.

Name	Description
	Contract End Date = Contract Start Date + Contract Term (Months).
Payment Estimate Information	
Rebate Estimate Payment	Available options are Yes or No.
Estimated Payment Base	Options are: • Customer Invoice (default) • Prior Period Payment • Two Qtr Prior Period Payment • Last Reconciled Payment
Estimated Payment Rate	Type in the rate.
Payment Due to Customer	Type in the number of days the payment is due to customer after receiving the claim.
Notes	
External Notes (printed)	You can choose to display your notes on the printed contract (visible to customer). Go to the Contract Print Template to define this option. The external note is limited to 4000 characters.

Name	Description
Minimum Order Attributes Changes to Minimum Order Attributes and Payment Type will be reflected in the contract's version if the contract is in Draft status, meaning that you're in the process of creating a new contract or amending an existing contract the version number will be incremented.	
Minimum Order Amount	Displays the minimum amount ordered in the contract. Note: This field is editable and is triggered by an application switch, which by default is set to be displayed.
Minimum Order Quantity	Displays the minimum quantity (unit) that is ordered in the contract. This field is editable and is triggered by an application switch, which by default is set to be displayed.
Minimum Order Block	Allows you to select the minimum quantity that is ordered in the contract. The options are: • Please Select • Yes • No

Name	Description
	This field is editable and is triggered by an application switch, which by default is set to be displayed.
Minimum Order Penalty	Displays the minimum penalty (unit) ordered in the contract. This field is editable and is triggered by an application switch, which by default is set to be displayed.
Comments	
Comments	Click this link to navigate to Comments section under Related Items. The Comments section is limited to 4000 characters. For more information see Comments.
Organization	Displays the name of the organization that the contract belongs to.
Time Zone	You can set the time zone for the contract based on the organization. The default value for this field is the time zone of the organization you selected while creating the contract. The field can be edited until the contract is saved, thereafter, the time zone is read only.

Select Customer Dialog Box

From the Select Customer dialog box you can select and designate a customer as the contracted customer for the contract you are viewing.

The following table describes the fields available in the dialog box. Required fields display an asterisk (*) next to the field name.

Name	Description
Customer Search Parameters	
Look in	Opens the folder list to locate a customer list.
Name*	Runs a “contains” search based on the search criteria.
ID*	Runs a “contains” search based on the search criteria
Type*	Runs a “contains” search based on the search criteria
SubType	Runs a “contains” search based on the search criteria.
City *	Runs a “contains” search based on the search criteria
State *	Runs a “contains” search based on the search criteria
Zip *	Runs a “contains” search based on the search criteria
Country*	Runs a “contains” search based on the search criteria.
COT	Runs a “contains” search based on the search criteria

Organization	Runs a “contains” search based on the search criteria
Search	Searches based on the criteria you entered.
Clear	Clears your search criteria.
Customer Search Results	
Name *	Displays the name of the customer that matches the specified search criteria. To sort by name, click the column header. Click the link to add this customer to the current selection.
COT *	Displays the Class of Trade associated with the customer.
ID *	Displays customer ID that matches the specified search criteria. To sort by ID, click the column header.
Type *	Displays customer type that matches the specified search criteria.

Selected Items	
Add	Adds the selected customer to the selection list before adding them to the contract (when you click OK).
Remove	Removes the selected customer.
Create New Customer	Opens the Create New Customer dialog box where you can manually create a new customer. The newly created customer can be added to the existing contract. NOTE: Access to this dialog box is controlled by the 'resource root.app.customers.createTempOrganization'. For more information on resources, see the <i>User Roles and Access Controls</i> guide.
Actions	
OK	Adds the selected customer to the contract.
Cancel	Cancels the action.

Create New (Temporary) Customer Dialog Box

This dialog box enables users to create temporary customers. Temporary customers may be used on contracts/ proposals in cases where a customer record has not yet been created in the Contract Management application.

However, any contract/proposal that contains a temporary customer cannot be implemented until a valid customer has been selected. You can submit a contract/proposal to the approval workflow using a temporary customer ID, but the application will generate a warning. This warning will become an error at implementation if you do not update your ERP system with the relevant customer information and then replace the Temporary Customer with an Actual Valid customer within the Contract Management application.

The following table describes the fields on the Contracts Create New (Temporary) Customer page. Required fields display an asterisk (*) next to the field name.

Name	Description
Customer Name	Specify a customer name for this temporary customer.
Class of Trade	Specify a Class of Trade for this temporary customer.
Street	Specify a primary address line for this temporary customer. There are four lines for additional address information.
City	Specify a city for this temporary customer.
State *	Specify a state for this temporary customer. Choices include the 50 states and the District of Columbia.
Zip	Specify a zip code for this temporary customer.
Country *	Specify a country for this temporary customer.
Customer Domain *	Specify if the temporary customer is Government or Commercial.
Customer Type *	Specify a customer type for this temporary customer.

OK	Adds the temporary customer information to the contract as the contracted customer.
Cancel	Cancels the action (add a temporary customer).
