
Rebates Workflow

Revenue Cloud High Tech (RC HT) is the control center for rebate programs and Rebate Management. By creating workflow steps and rules, you can send rebate programs to the appropriate people for approval.

The steps determine if approval is needed before advancing to the next step. If approval is needed, which specific users or user roles need to review the rebate program before it can move to Approved status. In addition, the rules allow you to define which products, customers, or benefit values which invoke the particular rule. For example, if a rebate program contains the Product Family, Networking, then approval is send to the User Role, Product Manager.

Rebate programs created from Quote line items and Contract line items will use the workflows that have already been defined for the associated Quotes and Contracts.

Creating Workflows

Overview

You can create a workflow for each standalone rebate program that is created in Rebate Management. Rebate programs created from Quote line items and Contract line items will use the workflows that have been pre defined for associated Quotes and Contracts.

To assign the appropriate approver to a rebate, create a workflow rule. Rules can only be added to workflows whose Status is Draft. A workflow rule is part of a workflow:

1. Create the workflow
2. Add a step to it
3. Define the rule within the step
The rule establishes your conditions for assigning an approver.

A workflow will get applied to a rebate when the rebate matches Currency, Document Type, Record Type, Rebate Sub Type, and Payee of the workflow.

Navigation

To create a workflow for a standalone rebate program:

HT Revenue Enterprise Cloud application > Welcome [User] > Workflow > Create New > Rebate

Creating a Workflow for Standalone Rebates

1. Click **Welcome [User] > Workflow**.
2. On the Workflow Summary page, click **Create New > Rebate**.
3. On the Workflow Rule Detail Page, name and describe the workflow.
4. Choose the attributes a rebate program must have (for the workflow to apply):
 - Document Type
 - Rebate Sub Type
 - Record Type
 - Payee
5. Click **Save & Stay**.
6. Click **Create New Workflow Step**
7. Enter a name for the workflow step in the Step Name field.
8. On the Step Detail Section page, enter the Step Detail for your rule.
9. Click **New**.
10. In the table line that appears beneath the Step Detail, edit the expression (your conditions) for assigning an approver.
Available expression types: Benefit Valuation, Distributor, End Customer, Product Family, Purchasing Customer, Sale Type, and Sub Family.
For **Rule**: If you combine more than one expression, use the AND/OR operators and parentheses to organize your expressions.
11. Click **Save & Return**.

Step Expression Evaluation

Step expression evaluation for:

- Evaluation for a bulk benefit line item occurs at the benefit line on the Bulk Benefits Detail page when at least one benefit line item satisfies the step expression.
- For MultiPayee Rebate and Group Rebate, enrolled members will be considered for workflow step expression evaluation.

[High Volume Benefits Detail Page](#)

Viewing Workflow of Line item

Overview

When a line item is submitted, users with the [ViewWorkflowStatus](#) capability will see a **View Workflow Status** icon at line level.

This enables users to know the status of each step in the line.

Navigation: [Rebates](#) > [Rebate Summary page](#) > [Rebate Detail page](#).

To view workflow of a line item:

1. Click **Rebate#**.
2. Click the **View Workflow Status** icon.
The Workflow Status page opens.

Note: If there are multiple steps, the step in which the workflow is currently waiting automatically gets highlighted.

3. The step details include: the step #, status of each step, step name, the user/user role it is assigned to, time stamp of when the step is sent and reviewed, and the reviewer name. The Step Type column displays Send Back(To - Step name) if it is a send back step and Approval is displayed if it is an Approval step. The Status column displays Sent Back when send back step is evaluated as true.

The legend on the page displays 'Manual - Sent back iterations exceeded allowed limit' for manual send back and 'Auto - Loop detected in workflow' for automatic send back.

Note: If a workflow step is assigned to a user role, based on the [ApprovalWorkflowCustType](#) property value (either Purchasing Customer or End customer), users with the specified role are matched, and the ones in the lowest org level are assigned to that workflow step.

While creating workflow rules, for each step in the rule, users can specify if while advancing to the next step, the current step becomes complete or partially complete.

Based on this, the status of next steps in all line items is determined:

- If the **Advance to Next step** is set to Complete, the statuses of all other line items show as Waiting. When all the steps are approved, the status of next steps in all the line items show as Sent.
 - If the **Advance to Next step** is set to Partially Complete, then the statuses of all other steps in the line items show as Sent.
-

Note: For advance to next step evaluation, nested steps are considered as an individual step.

Advance to next step condition is only at the parent level. Child steps do not have an advance to next step condition.

If a parent step is marked as complete, all the transaction items must be approved at the step (including the nested steps) to move to next step.

If a parent step is marked as partial complete all the transaction items which are approved at the step (including nested) move to next step.

Previewing Workflow

Overview

You may want to preview the workflow steps that your rebate will go through after submission, or preview the next workflow steps of a submitted rebate.

Navigation: Rebates > Rebate Detail page

Users with the [ViewWorkflowStatus](#) can preview a workflow, both before and after submitting the Rebate.

When you click Preview Workflow in Actions column of a rebate in draft state, Workflow Reconciliation window appears. You can see the probable approval steps the rebate can go through when a particular workflow is selected. When you click Preview Workflow in Actions column of a rebate in submitted state, you can see the steps that are already completed (if any) and the preview of next steps in the workflow.

To preview a workflow:

- 1. On the Rebate Detail page, for the relevant line item, click **Preview Workflow** under the **Actions** column.
If you are previewing the workflow before submitting the rebate, one of the following happens:
 - If there are multiple workflows with the same priority, the Workflow Reconciliation page opens with all the possible workflows:
 - 1. Select a workflow and click **Next**.
The Workflow Preview page opens with the selected workflow details.
 - 2. You may go back to the Workflow Reconciliation page and select the other workflows to preview how the workflow would progress.
 - If there is only one matching workflow, the Workflow Preview page opens with that workflow details.

3. If you are previewing the workflow after submitting the rebate.
- The Workflow Preview page opens giving you the real-time statuses, time stamps (Time Sent and and Time Reviewed), Assigned to (User/ role), Reviewer (Reviewed By) information, next steps, and step type in the workflow. The Step Type column displays Send Back(To : Step name) if it is a send back step and Approval is displayed if it is an Approval step. The Status column displays Sent Back when send back step is evaluated as true.

Note: The Status column in the Workflow Preview page shows the relevant statuses of the steps: Auto Reviewed, Sent, Skipped, Delegated or Escalated.

Delegating Workflow

Users with the [DelegateRebate](#) capability can delegate workflow from one user to another user. You can also delegate nested steps (i.e., both parent and child steps).

Navigation: Rebates > Rebate Summary Page > Rebate Detail page

o delegate a workflow:

1. On the Rebate Detail page, for the relevant line item, click the **View Workflow Status** icon under the **Actions** column.
The View Workflow Status page opens.
2. Click the **Delegate Current Step** icon.
The Delegate Current Step to User pop-up page opens listing all the approvers with [ApproveRebate](#) capability and matching the part's PFF.
3. Click the **Select** link adjacent to the relevant approver. An alert is sent to both previous approver and the selected approver. The new approver can click on the alert and approve the workflow step.

Withdrawing Rebate

Overview

If you have submitted a rebate, but want to withdraw some of its line items, or edit some details in the rebate header you can use the Withdraw rebate feature.

Navigation: **Rebates > Rebate Summary page > Rebate Detail page**

Who can withdraw a rebate

Only a Manufacturer user with the [WithdrawWorkflowRule](#) capability or the rebate owner can withdraw either all or selected line items in a rebate. If another user needs to withdraw a rebate from workflow, the user may use the Transfer action to transfer ownership of the rebate to self. Then, the Withdraw action becomes available. A rebate in the Submitted status can only be withdrawn.

To withdraw a workflow:

1. On the rebate Detail page, select the item(s) to be withdrawn.
2. Click **More > Withdraw**.
The Workflow Comments pop-up opens to enter your comments.

Note: At least one line item must be in Submitted status for this icon to be available under **More**.
3. Enter comments and click **OK**.
The comments are recorded for each line item and also in the rebate history log.

When you withdraw a rebate:

- The rebate header Workflow Status changes from Approved to pending and the rebate once again becomes editable to all users with the appropriate capabilities and org assignments.
- The status of the selected line item changes from Submitted to pending; and only those fields for which the user has the necessary edit capabilities become editable.
- The price field values of the selected lines changes to the previous price approved by the last approver, i.e., the last approved price.
- An alert is automatically sent to all the current approvers about the withdrawal.

Viewing Revisions of Workflow

Overview

The Workflow revision feature allows you to track changes and view the revision history of a rebate that is submitted.

A new workflow revision is created whenever a rebate is:

- Approved
- Withdrawn
- Sent to a step back to any of its previous steps

Whenever an approved rebate is re-submitted, a new revision is created. You can view both previous revisions and the current revisions.

To view workflow revisions:

1. Click the **Actions** icon for the required line item and select **View Workflow Revisions**. The Workflow Revisions page opens with details of the first revision.

Note: When a rebate is submitted for the first time, this action icon is only available when the line workflow status is either approved or withdrawn. However, when the rebate is resubmitted, this icon is always available, i.e. when the line workflow status is submitted, paused, approved.
2. The Workflow Revisions page displays the following columns:

Column Name	Description
Step #	Step number in the workflow
Status	Status of the step • Sent: if step is sent for review • Pending: if step is pending for approval • Skip: if the step expression is false • Reviewed: if step is reviewed • Auto-Reviewed: if step is auto reviewed • Escalated: if step is escalated • Sent Back: If manual Send to Previous Step action is performed on the View Workflow Status page or if send back step type is executed or if send back step is evaluated as true. • Sent Back Skipped (Auto): If a loop is detected in send back step type, the status will be Send Back Skipped (Auto). • Sent Back Skipped (Manual): If the iteration exceeds the value of the MaxSendBackIterations property, the status will be Send Back Skipped (Manual). • Delegated: if step is delegated • Rejected: if step is rejected (this status is only applicable for rebates)
Step Name	Name of the step
Step Type	The Step Type column displays Send Back(To - Step name) if it is a send back step and Approval Step is displayed if it is an Approval step. If manual Send to Previous Step action is performed on the View Workflow

Column Name	Description
	Status page, the Step Type will be Approval Step Sent Back To - [Step Name].
Assigned To	Role/Named Used to which the step was assigned
Time Sent	Time and date on which step was sent
Responded By	Name of the user who responded on the step
Time Responded	Time and date on which step was responded

3. To view other revision details, from the **Selected View** drop-down select the required revision.
The page displays the selected revision details.

NOTE: The 'Manual - Sent back iterations exceeded allowed limit' legend is displayed for manual send back and 'Auto - Loop detected in workflow' is displayed for automatic send back.

Alerts

Overview

The users subscribed to [RebateWorkflowStatusChanged](#) alert will receive a notification or email based on the notification rule. [RebateWorkflowStatusChanged](#) alert is generated when there is a change in workflow status of the rebate.

NOTE: For a user to receive an alert, they should have [ViewRebate](#) or [ViewAllRebates](#) capability.

For more information, see [Alerts](#).

Rebate Type Rule Conditions

You can set Rule Conditions to All or Rebate.

Rebate Sub Type Rule Conditions

You can set Rule Conditions to All, Channel Rebate, Base Rebate, or Growth Rebate.

Record Type Rule Conditions

You can set Rule Conditions based on Record Type of the rebate for [RebateWorkflowStatusChanged](#) alert. You can set Rule Conditions for All, Individual, Group, Multi-Payee rebate programs.

Following criteria should be met to view an alert based on Rule Condition - Record Type:

- Individual/Group rebate programs - Payee should belong to your org or child org and user should be subscribed to the alert.
- Multi-payee rebate program - At least one enrolled member should belong to your org or child org and user should be subscribed to the alert.

Example: Subscribing a User to RebateWorkflowStatusChanged Alert:

1. Create an org - Western US.
2. Assign user - Wakeman user and customers - 3Com - Mt. Prospect, 3Com - Santa Clara, 3Com-SC - Santa Clara to Western US org.
3. Subscribe Wakeman to receive [RebateWorkflowStatusChanged](#) alert.

Rejecting a Rebate

Rejecting Inline Rebate

An inline rebate program can be rejected on RC HT along with a transaction (Quote or Contract). If any one of the linked Quote or Contract items is rejected, the status of the benefit item in an inline rebate or inline high volume rebate is changed to Rejected. An approver can reject a quote or contract in submitted status. Approved benefits do not get rejected when quote items are rejected. A rejected rebate cannot be revised. For more information, see [Revising Inline Rebates in Quotes and Contracts](#).

NOTE: When a quote is deleted, its inline rebates are also deleted.

To reject an inline rebate program on RC HT:

1. On Quote/Contract Summary page, click **My Quotes**.
2. Select Needs Approval By Me.
3. On the Quote/Contract Detail page, select all or required line items.
4. Click **Reject**.
For more information on workflow statuses, see [Workflow Statuses](#).

Rejecting Standalone Rebate

A standalone rebate can be rejected on RC HT.

To reject a standalone rebate program on RC HT:

1. On Rebate Summary page, click **My Rebates**.
2. Select Needs Approval By Me.
3. On the Rebate Detail page, select all or required line items.
4. Click **Reject**.
 - The Workflow Status will change to Pending from Submitted.
 - Once an Approver clicks Reject, all the fields becomes editable.
5. If the rebate is updated and submitted again, it will be submitted to previous workflow.

Sending Back to Previous Workflow step

Overview

The Send Back step type allows you to select a previous step in a workflow. If you select **Step Type** as Send Back, a **Send Back** step is created. While creating a **Send Back** step it is necessary to specify a **Send Back To** step. If a **Send Back** step is defined in a workflow and if the expression in the step is evaluated to true, the approver in the **Send Back To** step will receive an alert. Once the approver approves the step, the workflow is continued from that step. If the expression in the step is evaluated to false, the step is skipped.

Cyclic behavior is repeatedly sending a step for approval. The following are the types of the cyclic behavior:

- **Automatic** - When a send back occurs, all the steps from **Send Back To** till **Send Back** step will be either auto reviewed or skipped and the status will be Send Back Skipped (Auto).
- **Manual** - When a send back occurs, at-least one step within the **Send Back To** till **Send Back** step will be sent for approval. The iteration of the loop is determined by the [MaxSendBackIterations](#) property. If the iteration exceeds the value of the property, the status will be Send Back Skipped (Manual).

If an approver is not satisfied with the recommendation of the previous approver and wants a re-evaluation, she can reassign the workflow to the previous approver. They can send back to any previous step, and alerts are sent to the new approvers again.

Navigation: Rebates > Rebate Summary page > Rebate Detail page

You can send a step back to any of the previous steps. This implies that all the approvals done till the current step are ignored and the rebate goes through the approval workflow from the selected step.

To send a step back to a previous step:

1. Navigate to the Rebate Detail page of the rebate.
2. Click the **Actions** icon for the required line item and select **View Workflow Status**.
The View Workflow status page opens.
3. Click the **Send Back to Previous Step** icon.
The Previous Step Selection Popup page opens with all the Parent steps available before the current step.

Note: Only Parent steps are displayed on this page, as you cannot send a rebate to a child steps. The step details include: the step #, status of each step, step name, and step type. If manual send back action is executed, the **Step Type** column displays Approval Type Send Back(To - Step name) and the **Status** column displays Sent Back. If it is an Approval step, the status will be Approval Type.

3. Select the required step and click **Continue**. A pop-up appears where you can enter comments, if any and click **Send**. The current step is sent to the selected step. The rebate goes through the approval process from the selected workflow step.
The change is saved as revision. Also, the Workflow approval alert for the current approver is removed, and a new alert is sent to the approvers of the selected step.

Workflow Expressions

The Line/Header value of the rebate is compared with line/header field values on the workflow expressions. The following table describes the step expression types available for a rebate Workflow:

Exp Type	Description
Line: Benefit Valuation	This expression is used to compare the line benefit evaluation with the specified value
Line: Distributor	This expression is used to compare the distributor with the selected distributor
Line: End Customer	This expression is used to compare the end customer with the selected end customer
Line: Product Family	This expression is used to compare the value with a selected product family from the list of product families.
Line: Purchasing Customer	This expression is used to compare the line purchasing customer with the selected purchasing customer.
Line: Sale Type	This expression is used to compare the line sale type with the selected Sale Type from the list.
Line: Sub Family	This expression is used to compare the value with a selected product family from the list of product families.

Workflow Field Mapping Matrix

The following table describes the mapping between the fields of the Workflow and Quote/Contract/Debit/Opp/Reg/
Rebate modules:

Workflow	Quote	Contract	Debit
Workflow Type	Quote	Contract	Debit
Is Blanket	Is Blanket	Is Blanket	Blanket
Document Type	Quote Type	Contract Type	N/A
Record Type	N/A	N/A	N/A
Rebate Sub Type	N/A	N/A	N/A
Channel	Channel	N/A	Channel
Currency	Currency	Currency	Currency
Purch Cust Pricing Region	The Purch Cust Pricing Region field is displayed if the EnablePricingDimension property value is set to PricingRegion.		
	Pricing Region in Customer/End Customer Detail	Pricing Region in Customer Detail	Pricing
Filter Customer By	Purchasing Customer/End Customer	Purchasing Customer/End Customer	Purchas

By Specific	The By Specific filter is dependent on the selection of the Filter Customer By field. This field displays the customer level available for a cu		
If By Specific	This field appears if a customer level is selected in the By Specific field. N/A specifies the workflow is applicable for all customers type se		
Geography	The Geography filter determines the geography of the selected customer in the If By Specific filter.

Workflow Statuses

Overview

Workflow status indicates the progress of a Rebate during the approval process.

The following table lists the workflow statuses shown on the Rebate header based on the workflow status of line items in that Rebate:

Workflow Status	Description
Processing	Intermittent status. Appears when the rebate line items exceed the value of the MinLinesForWorkflowEvent property and a workflow action is taken.
Conflict	Appears when multiple workflows are available for a line item.
Rejected	Appears when any one of the quotes or contract line items is Rejected.
Submitted	Appears when all the line items in quote or contract are submitted for approval in a workflow.
Partially Approved	Appears when few line items in quote or contract are approved.
Approved	Appears when all the line items in quote or contract are Approved.
Pending	Appears when all the line items in quote or contract are waiting to be submitted.

If the line items have different statuses, the Rebate’s header workflow status and registration status reflect the line item workflow status based on the highest priority (1 being the highest priority).

The following table lists different line workflow statuses, header Rebate Status, and priority:

Line Workflow Status	Header Rebate Status	Header Rebate Status Priority #	Status in Rebate Management
Even if one line is in Processing	Processing	1	Draft
Even if one line is in Conflict	Conflict	2	Draft
Even if one line is in Rejected	Rejected	3	Draft (Based on HtToSfdcRebateStatusMappingList property)
Even if one line is in Submitted	Submitted	4	Submitted
Even if one line is in Approved	Approved	5	Approved
Even if one line is in Pending	Pending	6	Draft

Example: If a Rebate has a line with workflow status as Conflict (Priority = 2) and another line item with workflow status as Submitted (Priority = 4), then the header workflow status will be Conflict (as it has the highest priority). This implies the header status always displays the line status with the highest priority.

The following table lists various quote/contract item statuses and its corresponding workflow status on Quote/Contract Detail page, workflow status on rebate detail page, Benefit Item Status, and Rebate Management Status for a given line item:

Sample Part	Quote/Contract Item Status	Workflow Status on Quote/Contract Detail Page	Workflow Status on Rebate Detail	Benefit Item Status	Status in Rebate Management
P1	Rejected	Submitted	Rejected	Rejected	Draft
P2	Approved			Approved	
P3	Submitted			Submitted	
P1	Quoted	Submitted	Submitted	Pending	Submitted
P2	Submitted			Submitted for Approval	
P3	Submitted			Submitted for Approval	
P1	Submitted	Submitted	Submitted	Submitted for Approval	Submitted
P2	Submitted			Submitted for Approval	
P3	Submitted			Submitted for Approval	
P1	Rejected	Rejected	Rejected	Rejected	Draft
P2	Rejected			Rejected	
P3	Rejected			Rejected	
P1	Approved	Approved	Approved	Approved	Approved

Sample Part	Quote/Contract Item Status	Workflow Status on Quote/Contract Detail Page	Workflow Status on Rebate Detail	Benefit Item Status	Status in Rebate Management
P2	Approved			Approved	
P3	Approved			Approved
