

Working with Knowledge Management

Indira Jambulingam | | 28 May 2019

What is Knowledge Management?

Knowledge Management (KM) can be described as

- A process of creating, sharing, using, and managing knowledge & information

OR

- An efficient way of handling information and involving people, process, technology to capture, manage, share, and find information.

Knowledge Management & Support Team Interaction

Knowledge Management Team:

- Michael Torok
- Indira Jambulingam

What we do:

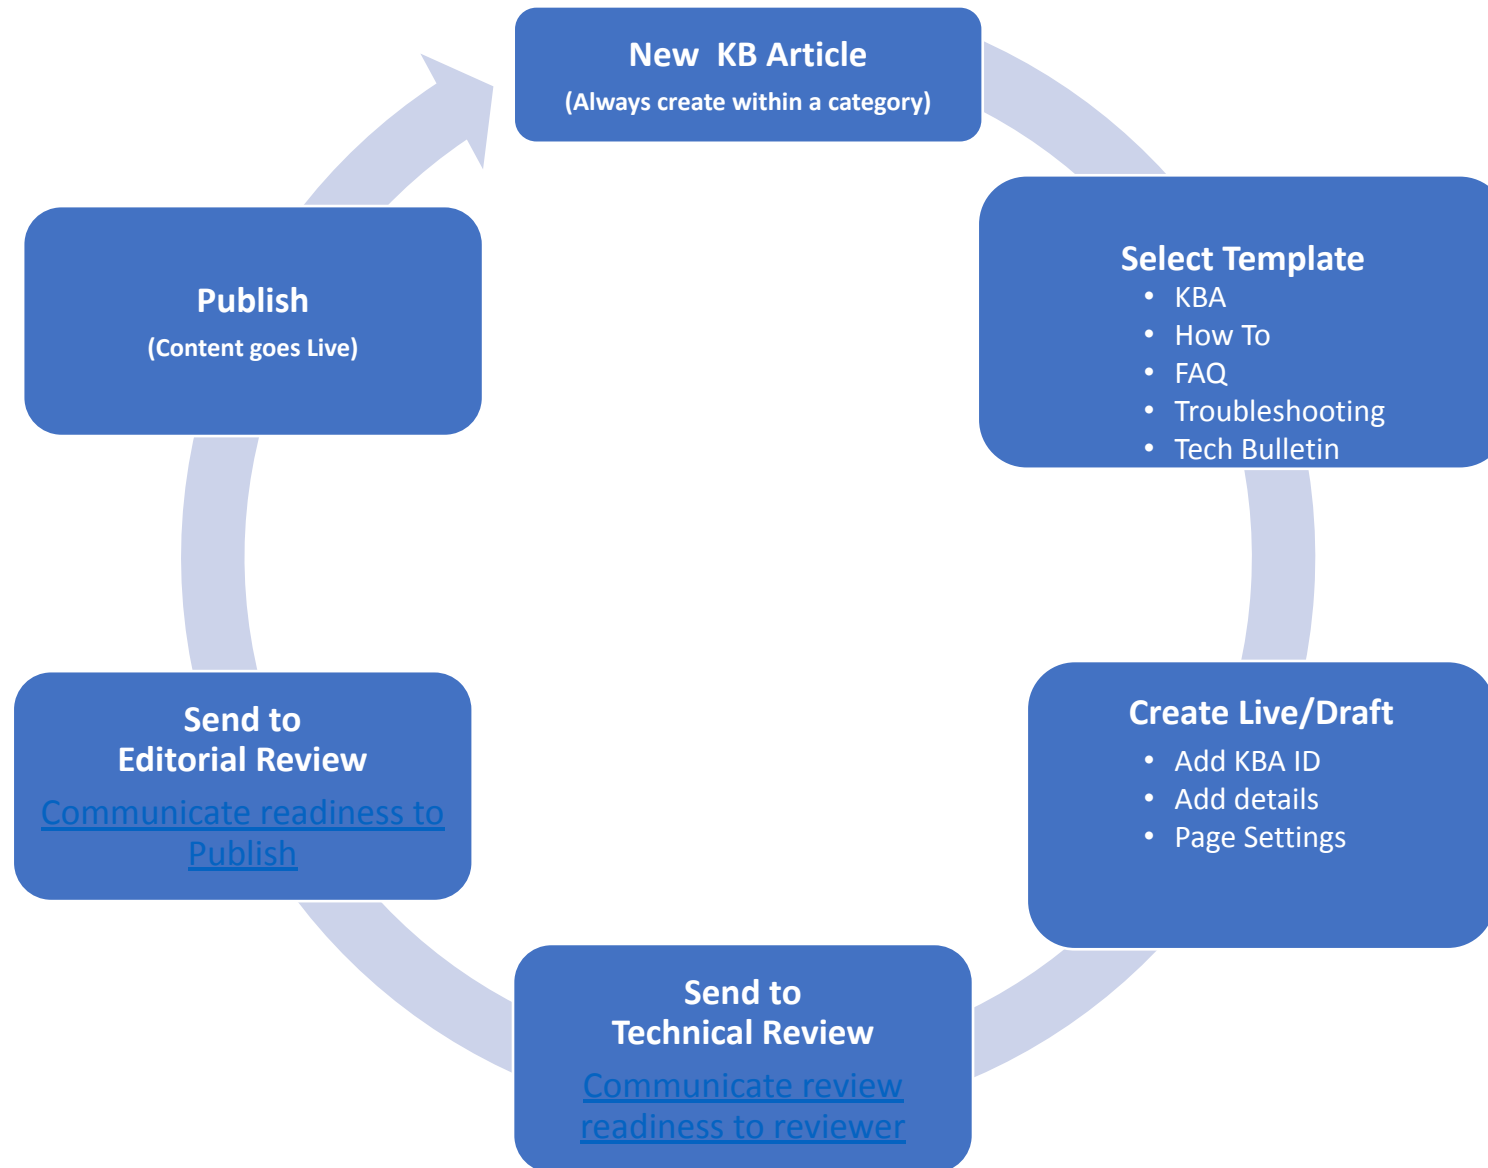

- Articulate the KB framework
- Help create articles from different sources
- Identify KB issues (display, searchability, cross reference links,...)
- Increase searchability of KB articles to increase use and reduce time-to-knowledge
- Create report metrics to scan usage of articles to analyze usage for case deflection

Sources for Knowledge Base

Knowledge Base

- Product Guidance
Content that did not make product documentation, KB serves as a placeholder till Documentation is public.
- Need for KB (Identified via Support Cases)
- **Ticket/Support Queue to KB**
- Community
- Product Guidance
- Slack

Knowledge Base Process: Creating a Net New Article

Knowledge Base Process: Update to Existing Article

Understanding Knowledge Base Templates

Add new page

**FAQ (Delphix)**
This is used to create new Frequently Asked Questions, FAQ content.

**How To (Delphix)**
This page is used to create new How To task based content. It should answer a specific question about how something works or how to solve a specific problem.

**KBA (Delphix)**
This page is used to create new Knowledge Base content. This template can be used for any reference content. It is used to explain functions, definitions, or settings about a feature in the product.

**Tech Bulletin (Delphix)**
This template is used to create new Tech Bulletin content.

**Troubleshooting (Delphix)**
This template is used when creating troubleshooting content.

☐ Create live ☒ Create draft

Create

Cancel

KBA:

Used to create a reference article.
This template covers most scenarios for providing more elaborate content.

FAQ:

Used to collate frequently asked questions. The content is normally a short Q&A style format.

Troubleshooting:

Used to create troubleshooting guidance with an Issue/Resolution format.

How To:

Used to create how-to guidance which is procedural. As a best practice it's good to provide scenario based examples.

Technical Bulletin:

Used to create a technical or security bulletin (TB) that is shared with customers for specific guidance. This has limited authorship.

Authoring Knowledge Base Articles: Where is it Located?

Knowledge Management (Confluence)
