New and Enhanced Features

See [Enhancements and Gaps](#).

Resolved Issues, Business and Testing Impacts

The following table lists the resolved issues that are part of this Hotfix and are recommended by Model N. Included in this table are the business impact of each resolution as well as the testing impact, if any.

JIRA ID #	Description	Expected Behavior
ADK Configurator		
RECHT-34446	Issue fixed: Config user (who can access the configurator) was unable to view the workflow actions on the Rebate Detail page when the configurator was turned on.	Verify that the config user is able to view workflow actions on the Rebate Detail page when the configurator is turned on.
Force Multiplier		
RECHT-34691	When multiple delete sync tasks were created as a part of unassigning Preferred Channels of a user, the first delete sync task was getting completed and the remaining sync tasks were obsoleted.	Verify that all the associated sync tasks are getting completed when Preferred Channels of a user are unassigned.

Enhancements and Gaps

The following table lists the enhancements and gaps fixed as part of this Hotfix.

JIRA ID #	Description	Expected Behavior
Workflow		
RECHT-34924	Gap Resolution: There was no option to add custom post processes on the workflow actions in the Rebate Detail page.	Verify that the Submit, Approve, Reject, and Withdraw buttons support post process configuration.
