

Welcome to the Redesigned Knowledge Base

Some rather big organizational changes have taken place, along with a few permission and procedural changes.

Front Page

One of the biggest changes you will see is that the front page, depending on your permissions, contains only 3 or 4 categories with a number of subsections listed below them. These subsections are hyperlinked to their representative sections. The desire here was to provide as much information and shortcuts as possible immediately accessible on the front page.

As you dive into the categories, let us know how the subcategories and guides fit with your understanding of the products. We've retained what we thought was key to the information architecture, but we are definitely open to feedback.

You will also notice that we've cleaned up structure and architecture, so that the only time you will be able to create a document/article is when you are in a guide. This allows us to stop losing author's work.

Previously, you were able to create an article at any level within the architecture, but that article would never be displayed unless it was moved to a guide. We have now eliminated that possibility.

Article Types

There are 4 different types of articles you can create. This is a bigger change, but we believe it will help you and our customers find what they need. These 4 article types are How To, FAQ, Reference, and Troubleshooting. When we keep these 4 different types, they can be displayed easily on their own guide tabs—providing easy and logical subsections:

Databases

+

Article directory

How To's

Reference

A

Adding Additional Mount Point for vFiles

E

Enabling SQL Tracing during Oracle VDB Provisions

S

SAP HANA: Exploring differences in licensing

SnapSync Fails with RMAN Errors ORA-19511, ORA-27192, RMAN-03009

Solving MSSQL Backups when Recovery Fork GUID is Changed on the Source Database

Article Type Definitions

These are the article types you can create.

FAQ

These are the frequently asked questions about a particular product or offering from Delphix.

Example:

https://support.delphix.com/Delphix_Virtualization_Engine/Delphix_Admin/KBA1014_SnapShot_and_SnapSync_Frequently_Asked_Questions

Reference

This should be a conceptual article. It defines a concept or a group of ideas or terminology. A reference article may be the root article which references a How To and/or Troubleshooting articles. We suggest you choose this article type if the content does not fall within the other categories.

Example:

(old site)

https://support.delphix.com/Support_Policies/KBA1003_Delphix_Product_Lifecycle_Policies

(new site)

https://delphix-training.mindtouch.us/Delphix_Support_Policies_and_Tech_Bulletins/Support_Policies/Guide_X/Delphix_Product_Lifecycle_Policies

How To

How To articles contain task-based content. For example, how to send information to support or how to capture logs.

Troubleshooting

Contain the steps to reproduce an issue (or references a How To article with the steps), what to capture during that procedure, and references How To articles on how to get that information to support.

Article Design and Formatting

We have provided a good deal of data within our article reformat.

KBA#	1041
Support Case#	N/A
Product Version	5.0, 5.1, 4.3, 4.2, 4.1, 4.0
Last Updated	Aug 5, 2018
Author	Claudia o'Callaghan
Reviewer	Mathew Watson

When authoring content, please provide the correct information at the top of each article. Check and update fields as a reviewer.

The following fields should contain information as appropriate:

KBA#

Offers a space to include the KBA number. This field will be found in search and eliminates the need to include the KB number in the title.

Support Case #

If we choose to provide support case numbers, they can be added here. This one may be optional or ultimately deleted. It was included because some of the KBAs contained or referenced case numbers.

Product Version

The version of the product to which this article applies. Adding this field to the article itself, instead of in the metadata, as metadata only allowed a single instance. This field will allow multiple versions to be listed.

Last Updated

Provides the date of last update so that it can be found at-a-glance by those interested in the freshness of the material.

Author

Allows attribution to be provided. Important that the author of an article be recognized as a knowledge resource and that we recognized those author's whose work is often referenced.

Reviewer

Provides a space for the technical review to add their name. Again, important as a knowledge resource and for attribution.

Tagging Content as Internal/External

Previously, content at first glance was split into categories which were Internal and External facing. Now with restructuring content, we have eliminated the "Internal Content" sub category. We have now combined all articles under one category, and mark articles as Internal when they should not be shared outside of Delphix.

We have created a quick and easy way to tag your article as Internal when an author creates content. We will provide details on using the improved tags as part of our authoring guidance.

Internal Facing content has the following content per topic.

This document is for internal use only.
Do Not Distribute

How Articles Look

We have updated formatting and believe we have created a cleaner design for your content. Headers and content use the font and color that is Delphix brand-permitted.

Tables no longer change when hovered over and they contain cell divisions, by default. If you need a table without interior cell borders, there is a procedure to create that style, also. For more information at this time, feel free to reach out to me or Indira directly. We will document this procedure and include it in the KB section of the new site.

Old Table:

Mission Control

Release	General Availability	End of Primary Support	End of Extended Support
1.4.1	Jun-30-2016	TBD	TBD
1.4.0	Oct-11-2015	Jun-30-17	Jun-30-2021

New Table:

Mission Control

Release	General Availability	End of Primary Support	End of Extended Support
1.4.1	Jun-30-2016	TBD	TBD
1.4.0	Oct-11-2015	Jun-30-17	Jun-30-2021

There are many subtle changes, beyond the font and the table, including providing a leader line above all head 1 headings for better division on the page as seen below:

Old Headings:

Heading 1

Text

Heading 2

Text

Heading 3

Text

Heading 4

Text

Heading 5

Text

New Headings:

Heading 1

Text

Heading 2

Text

Heading 3

Text

Heading 4

Text

Heading 5

Text

Feel free to explore the other stylistic changes and give us feedback.

Roles

The following roles capabilities will be defined for our employees, authors, technical reviewers, editorial reviewers, and managers.

Please consider the following table and provide feedback on whether these permissions align with what you feel you need – most support staff will be designated as Draft Contributors, while all employees will be granted the ability to view all content:

	Viewer (Employee)	Draft Contributor (Author and Technical Reviewer)	Author (Editorial Reviewer)	Editor (Manager)
--	----------------------	--	-----------------------------------	---------------------

Log In	X	X	X	X
View Pages	X	X	X	X
